

J.DRAIN

J-DRAIN[®] CD 3302 Chimney Drain Systems

Product Description:

Chimney Drain 3302 series is available in 12" 18", & 24" wide strip of .4" profile dimple drainage core that is punched to allow double sided drainage, then bonded to a layer of geotextile filter fabric on each side of the core. Their purpose is to draw the ground water which migrates through the soil adjacent to the wall and quickly convey the water down to the base collection system (**J-DRAIN SD series**), providing hydrostatic relief. Often dense compacted soil layers form between the base part and the top of the backfill and water collecting against the wall has difficulty finding its way to the base collection system. Chimneys add very little to the overall cost of the system, but greatly enhance the effectiveness of the drainage system.

Available in 12", 18", and 24" widths. Available with AASHTO approved fabric.

Applications:

Popular applications for chimneys are **retaining** and **lagging** walls or other vertical applications where full wall coverage is not feasible. Often times in these applications, chimney drains provide a practical alternative to accommodate for protrusions in the wall surface, i.e. tie backs & soil nails. Chimney drains may also be used as a cost effective alternative when full wall coverage is not cost effective and not required.

The information contained herein is believed by JDR Enterprises, Inc. to be accurate and is offered solely for the customer's consideration, investigation and verification. Determination of suitability for use is the responsibility of the user. JDR's Limitations, Limited Warranty, & Disclaimer along with Standard Terms & Conditions apply. See www.j-drain.com for more info. <u>Limitations</u>: J-DRain is resistant to chemicals in normal soil environments. However, some reagents may affect the performance of J-DRain. A JDR representative should be contacted for further information to determine the suitability of use of J-DRain in unusual soil environments. J-DRain should be limited to its exposure to ultra-violet sunlight. J-DRain should be backfilled or covered within seven days of installation. <u>Disclaimer</u>; All information, drawings and specifications are based on the latest published information at time of printing. JDR reserves the right to make changes due to manufacturing improvements and engineering at any time. All physical properties are minimum average roll values (MARV). Standard variations of 10% in mechanical properties and 15% in hydraulic properties are normal.
