

Quail Haven Horse Farm San Diego, CA

Quail Haven Farms is located in the Bonsall Foothills, just outside San Diego, California. The owners of Quail Haven Farms purchased the property in June 2004 with dreams of running a safe, clean, and professional equestrian center. In order to reach these dreams, Quail Haven Farms was tasked with addressing the poor drainage conditions that were previously associated with the main jumping ring. This area was neglected and without natural drainage, producing a situation of constantly standing water. After removing the topping material and grading

down to the clay base, 1,800 square feet of **J-DRain SWD** was installed in shallow, narrow trenches on 15 ft. centers. After covering the sub-base with decomposed granite and sand, Quail Haven Farms was ready for business.

J-DRain SWD (Site Water Drainage) is an effective method for removing standing water in many landscape applications without disturbing the surrounding areas. The application of **SWD** can be used in a variety of different applications such as athletic fields, natural and synthetic turfs, playgrounds, golf courses, and lawns and gardens. Quail Haven Farms is ecstatic of the effect **J-DRain SWD** had on their arena. Now, even after a heavy downpour, all standing water is drained within 30 minutes.
